

# MACHINE LEARNING

**LIVE SESSION**

**15 AUG, 2020**

**10 AM : 12 PM**

# BOOTCAMP STRUCTURE

**DAY 1 - PANDAS AND NUMPY**

**DAY 6-POLYNOMIAL REGRESSION**

**DAY 11 - NAIVE BAYES**

**DAY 2 - MATPLOTLIB AND SEABORN**

**DAY 7 - LOGISTIC REGRESSION**

**DAY 12 - KNN**

**DAY 3 - DATA ANALYSIS / EDA**

**DAY 8 - DECISION TREE**

**DAY 13 - SVM**

**DAY 4 - MACHINE LEARNING**

**DAY 9 - RANDOM FOREST**

**DAY 14- CLUSTERING ALGORITHMS**

**DAY 5 - LINEAR REGRESSION**

**DAY 10 - XG BOOST**

**DAY 15 - DEPLOYING MODELS**

# R SQUARED

$$R^2 = 1 - \frac{SS_{RES}}{SS_{TOT}} = 1 - \frac{\sum_i (y_i - \hat{y}_i)^2}{\sum_i (y_i - \bar{y})^2}$$

# R SQUARED

$$R^2 = 1 - \frac{SS_{RES}}{SS_{TOT}} = 1 - \frac{\sum_i (y_i - \hat{y}_i)^2}{\sum_i (y_i - \bar{y})^2}$$

# LINEAR REGRESSION

# POLYNOMIAL REGRESSION

# POLYNOMIAL REGRESSION

# STEPS IN POLYNOMIAL REGRESSION

Polynomial regression is a two step process

# ASSUMPTIONS OF REGRESSION

## LINEARITY

There should be linear relationship between dependent and independent variables

How to check ?

By looking at the residuals vs fitted plot.

# ASSUMPTIONS OF REGRESSION

**Normality of residuals**

**Residuals must be normally distributed.**

**How to check ?**

**By plotting histogram and qq plot.**

# ASSUMPTIONS OF REGRESSION

**No Multicollinearity**

**There should be no or little collinearity between independent variables.**

**How to check ?**

**By checking correlation, scatterplot or by checking the vif value.**

# ASSUMPTIONS OF REGRESSION

**Homoscedasticity**

**Equal variance in residuals. There shouldn't be any pattern in residuals vs fitted plots**

**How to check ?**

**Residuals vs fitted plots.**

# ASSUMPTIONS OF REGRESSION

**No Autocorrelation**

There shouldn't be any autocorrelation in residuals. Autocorrelation means future values should not be correlated with past values

**How to check ?**

**Residuals vs time plots with  
different lags**
